Veeam Recovery *to Microsoft Azure*

Maintain business continuity with next-generation on-demand recovery in the cloud

Whether you're a power Azure user, or new to the cloud, Veeam and Microsoft Azure can help you maintain business continuity and Availability for your apps and data with the next generation of recovery in the cloud.

Today's modern business is faced with protecting a variety of virtualized VMs, physical servers and endpoints located in multiple locations. The constantly growing amount of data makes it increasingly difficult to scale and manage the protection of an organization's most critical workloads. Further, many organizations are also unable to properly manage the complicated network setup and configuration tasks associated with establishing a cloud-based recovery solution. They may also lack the budget to maintain a staff of networking engineers to manage connectivity.
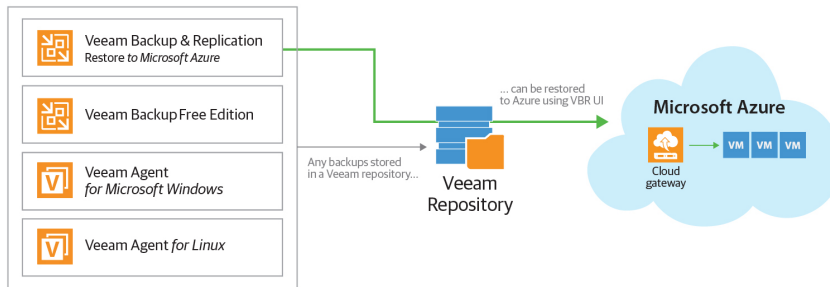

Veeam Recovery *to Microsoft Azure*

With **Veeam Recovery *to Microsoft Azure***, you can leverage the public cloud as an on-demand recovery site — making advanced, enterprise-level recovery affordable for any size business — without the need to build or maintain a costly recovery site. This complete turn-key solution delivers cloud restore for Veeam backups, and is enhanced with Veeam PN (powered network) — an easy to use, light-weight software defined networking (SDN) solution to eliminate complicated VPN installation and simplify network configuration to create the ultimate recovery site in Microsoft Azure.

Veeam Recovery *to Microsoft Azure* enables customers to:

• Leverage Azure for business continuity, eliminating the high cost of a dedicated recovery site

• Simplify recovery site configuration and deployment with a complete solution for networking setup

• Seamlessly and securely migrate on-premises workloads to Microsoft Azure

Veeam Restore *to Microsoft Azure*

Backup anything, anywhere, and restore in *Azure*

Restore Windows- and Linux-based VMs, physical servers or endpoints.

Restore *to Microsoft Azure*, included in Veeam Availability Suite, delivers cloud restore for Veeam backups to optimize resource allocation and gain new recovery options. It enables users to take on-premises VMware and Hyper-V VMs, physical servers and endpoints, and restore or migrate them to the cloud. With Restore *to Microsoft Azure*, users can:

- Restore or migrate physical or virtual workloads to Azure
- Restore to Azure directly from the Veeam Backup & Replication™ user interface
- Execute planned workload migration

Veeam PN *for Microsoft Azure*^{NEW}

Delivers On-Demand recovery in the cloud

Easily leverage Microsoft Azure as an on-demand recovery site with a complete solution for networking setup

Veeam PN *for Microsoft Azure* (Veeam Powered Network), is a FREE solution designed to simplify and automate the setup of a recovery site in Microsoft Azure using lightweight software-defined networking (SDN). It helps maintain business continuity and Availability by reducing the complexity of VPN deployments and is designed for businesses of ALL sizes, including service providers.

Veeam PN is easy to deploy and eliminates manual networking connectivity providing the next generation of on-demand recovery in the cloud. It's even useful if you need to quickly restore a server, VMs, or a few physical servers and laptops. What's best - you don't even need to have an Azure account, or need to be making payments to Azure until a need for recovery arises.

Get Veeam Recovery *to Microsoft Azure* today

Restore *to Microsoft Azure* is available as a built-in feature of Veeam Availability Suite, Veeam Backup Essentials™, and Veeam Backup & Replication, as well as a FREE pre-configured Azure appliance available for download in the Azure Marketplace.

Veeam PN *for Microsoft Azure* can be downloaded for **FREE** in the Microsoft Azure Marketplace for Azure-based deployments and through veeam.com for on-premises and cloud deployments. **Learn more:** www.veeam.com/cloud-data-recovery-azure.html
